THE CONFERENCE

As the world's population edges towards 9 billion, the strain on the planet's resources is steadily increasing. In both the developed and developing world there is a growing demand for food, manufactured goods and improved access to clean water and fuel. Over the past 30 years it has become obvious that the products of human manufacture, even those produced to benefit society, can have negative effects on human health and the environment.

The field of Green and Sustainable Chemistry has developed to help monitor, understand and limit the changes to our world due to the varying levels of chemicals in our environment. It seeks for methods to reduce waste, energy and use of resources. This will not only contribute to a more sustainable growth of industry but also to a more green economy and environment.

A unique aspect of this conference is its broad scope, addressing the many diverse fields of Green and Sustainable Chemistry, while other meetings in this field are focused mainly on the synthesis aspects. The goal of the meeting is to bring together international researchers, from academia and industry, to communicate and share the latest developments across the broad and diverse fields of Green and Sustainable Chemistry.

As the first edition of this conference (Berlin, Germany, 4-6 April 2016) was very well received by the participants, the second Green and Sustainable Chemistry Conference will again be a forum to address these challenges in a broad unique manner encompassing many diverse fields of Green and Sustainable Chemistry.

TOPICS INCLUDE

- Mineral resources and recycling
- Resources for organic molecules
- Synthesis and catalysis
- Energy conversion
- Green and sustainable pharmacy
- Sustainable chemistry and legislation
- The UN Sustainable Development Goals and sustainable chemistry
